

Clean Set of Claims

1. A notification module for a voice messaging system, comprising:
an auto dialing calling module adapted to initiate a communication
with a user at a remote location;

a table associating particular events with a need for notification of
said user; and

a controller to activate said auto dialing calling module to notify said
user upon satisfaction of a particular event;

wherein said satisfaction of said particular event is determined
based on a comparison of a plurality of entries in said table to call related
information contained in a log.

16. A method for notifying a user of a voice messaging system or
other designated party upon satisfaction of a predetermined event based on
logged call related information regarding incoming calls, comprising:

logging a plurality of entries of call related information as it is
received by said voice messaging system;

reviewing said plurality of entries of logged call related information
for satisfaction of a predetermined event by more than one incoming call based
on said logged call related information; and

notifying a remote user with a notification message in response to
satisfaction of said predetermined event.

23. Apparatus for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls, comprising:

means for logging a plurality of entries of call related information as it is received by said voice messaging system;

means for reviewing said plurality of entries of logged call related information for satisfaction of a predetermined event by more than one incoming call based on said logged call related information; and

means for notifying a remote user with a notification message in response to satisfaction of said predetermined event.
